Investment Philosophy

The Short Term Fixed Income strategy is managed to provide a high degree of current income with limited interest rate risk by investing in high quality investment grade corporate bonds and U.S. Government securities. The separate account strategy is actively managed with regards to security selection and yield curve exposure with an objective to generate a total return in excess of the index over a full market cycle.

3Q 2019 Portfolio Commentary

The increasingly cautious tone to investor sentiment witnessed throughout the year was again evident this past quarter as global economic growth and inflation expectations continued to decline. While the economy is continuing to advance, the rate of growth has clearly slowed. Current expectations are that GDP will advance 2.0% in 2019 and slow further in 2020 to 1.7%, a meaningful deceleration from the 2.9% growth experienced in 2018. A central theme underlying the slowing U.S. growth outlook has been the lagged effect of ill-timed prior Fed rate increases and the ongoing uncertainties resulting from the U.S. China trade dispute. A key catalyst for increased investor concern during the third quarter was a surprisingly sharp decline in the manufacturing outlook to a level not seen in nearly ten years. Trade tensions and the resulting pullback in business sentiment has been a meaningful headwind for the manufacturing sector, and the recent reading now suggests that this segment of the economy is already in the grips of a recession. The modest strength the U.S. economy has been experiencing has been heavily weighted on the resilience and strength of consumer spending. Although a lagging indicator, the strength of the labor market continues to impress with the most recent payroll data showing the unemployment rate at a fifty year low of 3.5% and wage growth advancing 2.9% year over year. Whether a contraction in the manufacturing sector and growing trade uncertainties results in a slowdown of consumer spending is a growing point of concern and central to the economic outlook. The most recent economic survey that measures the pace of consumer spending has slowed, but encouragingly still suggests positive momentum. As expected, the Federal Reserve has responded to this uncertain outlook by continuing to reduce short term interest rates. Expectations are high that they will again cut rates at the upcoming October meeting of the FOMC.

Reflecting increased recession risks, U.S. Treasury yields declined sharply during the quarter with U.S. 10-year bonds re-testing the all-time low in yields last seen in 2016. The 10-year U.S. Treasury closed the quarter at a yield of 1.67%. In light of the large portion of global bonds with negative yields, slowing global growth, and little to no inflation pressure, it's of little surprise that interest rates in the U.S. continue to decline. We continue to believe that the actions of the Federal Reserve to reduce interest rates is temporarily supportive of risk assets, but that the growing risk of an economic slowdown warrants a more conservative portfolio structure. In accordance with this outlook, we continue to take advantage of opportunities to increase the overall credit quality of the portfolio by increasing exposure to the more defensive segments of the corporate bond market. We've also focused new investments along segments of the yield curve that we expect will outperform as the Federal Reserve continues to reduce short term interest rates.
